

Ruthenium

Ru (Ru I). Strongest classified transitions below 2 μm (NIST): 70 levels, 90 lines.

Ru + ionisation limit 59366.40 cm⁻¹ = 7.36050 eV (168.445 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element <[[J||J']>| in ea;
Matrix elements are measured or NIST values; * = high-accuracy theory. ∞ = model calculation.
Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, n = 70.
Level caption: NIST energy and measured lifetime (where one exists).

Arrow colour = vacuum wavelength (nm)
