

Calcium-43

⁴³Ca (Ca I), nuclear spin *I* = 7/2. Energy levels and transitions below 2 μm: 34 levels, 55 lines.

Ca⁺ ionisation limit 49305.92 cm⁻¹ = 6.11315 eV (202.815 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element [*U*||*er*||*J'*)] in *ea*₀
Matrix elements are measured or NIST values; * = high-accuracy theory, ≈ = model calculation.
Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, *n* = 70.
Level caption: NIST energy and measured lifetime (where one exists).

λ, ν from NIST level energies unless a measured frequency for this isotope is available. A: measured value or NIST.
Γ/2π: natural linewidth of the upper level, 1/(2πτ).
