

Curium

Cm (Cm I). Classified transitions below 2 μm (levels and lines from the literature): 83 levels, 88 lines.

Cm⁺ ionisation limit: 48330.68 cm⁻¹ ≈ 5.99224 eV (206.908 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element $|U| |er| U|$ in ea₀
Matrix elements are measured or NIST values: * = high-accuracy theory, = = model calculation.
Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, n = 70.
Level caption: energy (from the cited literature; NIST lists no excited levels) and measured lifetime (where one exists).

λ, ν from the level energies of the cited literature (NIST lists no excited levels) unless a measured frequency for this isotope is available. A: measured value or NIST.

Γ/2π: natural linewidth of the upper level, 1/(2πτ).
