

Europium

Eu (Eu I). Strongest classified transitions below 2 μm (NIST): 68 levels, 90 lines.

Eu + ionisation limit 45734.74 cm⁻¹ = 5.67039 eV (218.652 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element |⟨J||er||J'⟩| in ea₀
Matrix elements are measured or NIST values; * = high-accuracy theory, ≈ = model calculation.
Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, n = 70.
Level caption: energy (NIST, or a measurement of the last 20 years where one exists) and measured lifetime (where one exists).

λ, ν from NIST level energies unless a measured frequency for this isotope is available. A: measured value or NIST.
Γ/2π: natural linewidth of the upper level, 1/(2πγ).

¹⁵³Eu hyperfine structure (I = 5/2)			
Level	A (MHz)	B (MHz)	Shift of each F level from the centre of gravity (MHz)
