

Germanium

Ge (Ge I). Strongest classified transitions below 2 μm (NIST): 20 levels, 54 lines.

Ge⁺ ionisation limit 63713.24 cm⁻¹ = 7.89943 eV (156.953 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element $[U||e\Gamma||J]$ in ea₀
Matrix elements are measured or NIST values; * = high-accuracy theory, ≈ = model calculation.
Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, $n = 70$.
Level caption: energy (NIST, or a measurement of the last 20 years where one exists) and measured lifetime (where one exists).
