

²⁴Mg (Mg I), nuclear spin $I = 0$. Energy levels and transitions below 2 μm : 18 levels, 61 lines.

Mg⁺ ionisation limit 61671.05 cm⁻¹ = 7.64624 eV (162.151 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element $\langle U || er || J' \rangle$ in ea_0
 Matrix elements are measured or NIST values; * = high-accuracy theory, $\approx$ = model calculation.
 Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, $n = 70$.
 Level caption: energy (NIST, or a measurement of the last 20 years where one exists) and measured lifetime (where one exists).

λ , ν from NIST level energies unless a measured frequency for this isotope is available. A : measured value or NIST. $\Gamma/2\pi$: natural linewidth of the upper level, $1/(2\pi\tau)$.

Isotope shifts
