

Magnesium-25

²⁵Mg (Mg I), nuclear spin *I* = 5/2. Energy levels and transitions below 2 μm: 18 levels, 61 lines.

Mg ⁺ ionisation limit 61671.05 cm⁻¹ = 7.64624 eV (162.151 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element $|U\|er\|U\rangle|$ in ea₀
Matrix elements are measured or NIST values; * = high-accuracy theory, ≈ = model calculation.
Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, *n* = 70.
Level caption: energy (NIST, or a measurement of the last 20 years where one exists) and measured lifetime (where one exists).

λ, ν from NIST level energies unless a measured frequency for this isotope is available. A: measured value or NIST.

Γ/2π: natural linewidth of the upper level, 1/(2πτ).

²⁵Mg hyperfine structure (*I* = 5/2)

Level	A (MHz)	B (MHz)	Shift of each F level from the centre of gravity (MHz)
