

Cerium

Ce (Ce I). Strongest classified transitions below 2 μm (NIST): 67 levels, 90 lines.

Ce ⁺ ionisation limit 44672.00 cm⁻¹ = 5.53862 eV (223.854 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element |(U||er||U)| in ea0
Matrix elements are measured or NIST values; * = high-accuracy theory, ≈ = model calculation.
Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, n = 70.
Level caption: energy (NIST, or a measurement of the last 20 years where one exists) and measured lifetime (where one exists).

Arrow colour = vacuum wavelength (nm)

Strongest transitions

λ, ν from NIST level energies unless a measured frequency for this isotope is available. A: measured value or NIST.

Γ/2π: natural linewidth of the upper level, 1/(2πτ).
