

Rhenium

Arrow label: vacuum wavelength | reduced dipole matrix element $[U|er|U']$ in ea₀
Matrix elements are measured or NIST values; * = high-accuracy theory, ≈ = model calculation.
Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, $n = 70$.
Level caption: energy (NIST, or a measurement of the last 20 years where one exists) and measured lifetime (where one exists).

Re (Re I). Strongest classified transitions below 2 μm (NIST): 67 levels, 90 lines.

Re⁺ ionisation limit: 63181.60 cm⁻¹ = 7.83352 eV (158.274 nm)

Strongest transitions

λ, ν from NIST level energies unless a measured frequency for this isotope is available. A: measured value or NIST.
Γ/2π: natural linewidth of the upper level, 1/(2πτ).
