

Er³⁺ ionisation limit 49262.00 cm⁻¹ = 6.10771 eV (202.996 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element $\langle U|er||U\rangle$ in ϵ_0
Matrix elements are measured or NIST values; * = high-accuracy theory, $\approx$ = model calculated.
Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, $n = 70$.
Level caption: energy (NIST, or a measurement of the last 20 years where one exists) and measured lifetime (where one exists).
