

Kr (Kr I). Strongest classified transitions below 2 μm (NIST): 45 levels, 70 lines.

Kr⁺ ionisation limit 112914.43 cm⁻¹ = 13.99961 eV (88.563 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element $|\langle f|er||f'\rangle|$ in $e a_0$
 Matrix elements are measured or NIST values; * = high-accuracy theory, $\approx$ = model calculation.
 Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, $n = 70$.
 Level caption: NIST energy and measured lifetime (where one exists).

Strongest transitions

λ , ν from NIST level energies unless a measured frequency for this isotope is available. A : measured value or NIST. $\Gamma/2\pi$: natural linewidth of the upper level, $1/(2\pi\tau)$.
