

Palladium

Pd (Pd I). Strongest classified transitions below 2 μm (NIST): 25 levels, 45 lines.

Pd⁺ ionisation limit 67241.14 cm⁻¹ = 8.33684 eV (148.718 nm)

Arrow label: vacuum wavelength | reduced dipole matrix element $|U||er||J\rangle\rangle|$ in ea_0
Matrix elements are measured or NIST values; * = high-accuracy theory, $\approx$ = model calculation.
Arrow width grows with the Einstein coefficient A. Dotted: forbidden (clock, M1, E2). Dashed: Rydberg excitation, $n = 70$.
Level caption: NIST energy and measured lifetime (where one exists).
